

WINDOWS 11 INSTALLATION

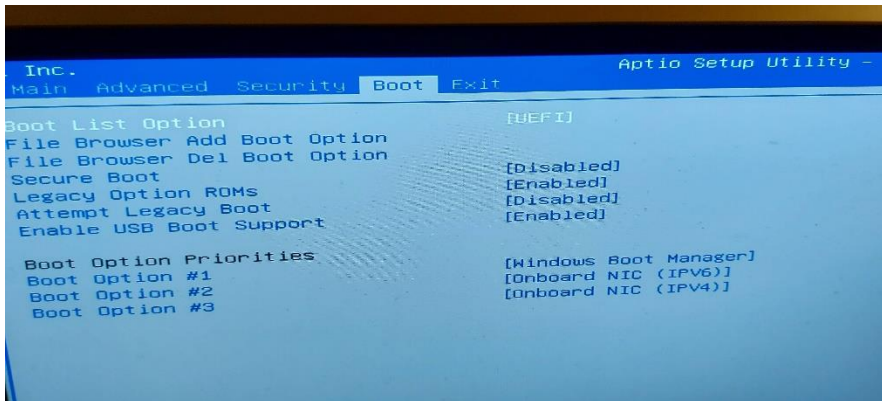

OPTION 1: Upgrading From Windows 10

1. Enter <https://www.microsoft.com/software-download/windows11> on your URL
2. Download windows installation assistant and install it on your computer.
3. Your computer must be having a genuine or registered copy of windows 10 installed
4. Run the downloaded windows installation assistant as an administrator, accept the license agreement and install the program.
5. Once installed, it will prompt to restart your computer. Click Restart Now.

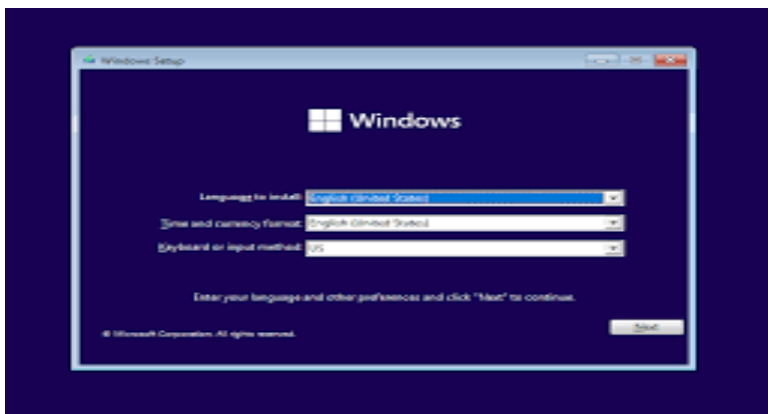

OPTION 2: Install Windows 11 ISO Image

1. Have a blank USB disk to create a bootable disk.
2. Confirm your computer can support a 64-bit CPU by searching the system information.
3. It is advisable to have internet connection then enter <https://www.microsoft.com/software-download/windows11> on your URL.
4. Download the OS multi edition ISO image on your computer for 64-bit devices.
5. Burn the image onto the disk to create bootable disk.
6. Use tools such as Rufus, ISO to USB, Free ISO Burner or Active @ ISO Burner and follow the procedures to completion on their respective website.
7. Switch off your computer, insert the bootable disk then switch on your computer and at the BIOS stage(Black or Blue screen) promptly press the function keys F9 or F10 for boot options

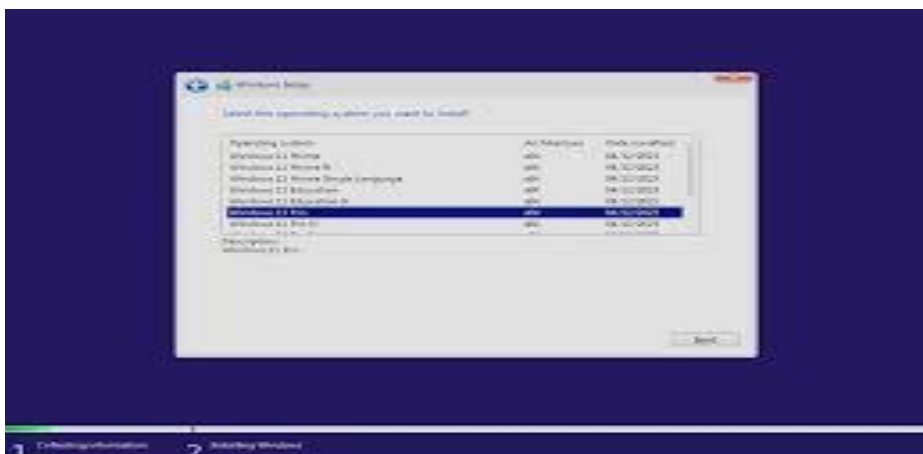

8. Find the boot button, select your boot option priorities (USB as 1st priority) and save the changes of the settings. The interface looks different with computers.

9. Restart your computer so that it boots from the selected option (USB option)

10. Accept the license agreement and click NEXT until you are required to select the version of windows 11 you wish to install and click NEXT

11. Follow the procedure by clicking NEXT or INSTALL until complete
12. Once MS Windows is installed configure your settings to liking to personalize user interface
13. NOTE: Windows activation can be done during or after installation and your PC need to have internet connection.
