MYSQL INSTALLATION

1. Enter https://dev.mysql.com/downloads/installer/ on your URL and install the latest MySQL version

2. Find your downloaded program and double click for installation. The setup will begin and require

    you Agree to the license agreement and click Next.

3. Select Custom installation so as to choose the products you wish installed in the system

4. Expand fully the Available Products by clicking all the +signs of the products you wish to install.

5. Then separately select MySQL Server 8.0.37, MySQL Workbench 8.0.37 and MySQL Shell 8.0.37.

    Using the buttons at the middle transfer all applications to the right and click Next.

6. The installation will check for requirements and notify if the standards are up to standard or need to

    install or upgrade something.

7. Once it is Ready to Install click Execute and then Next until installation is completed successfully

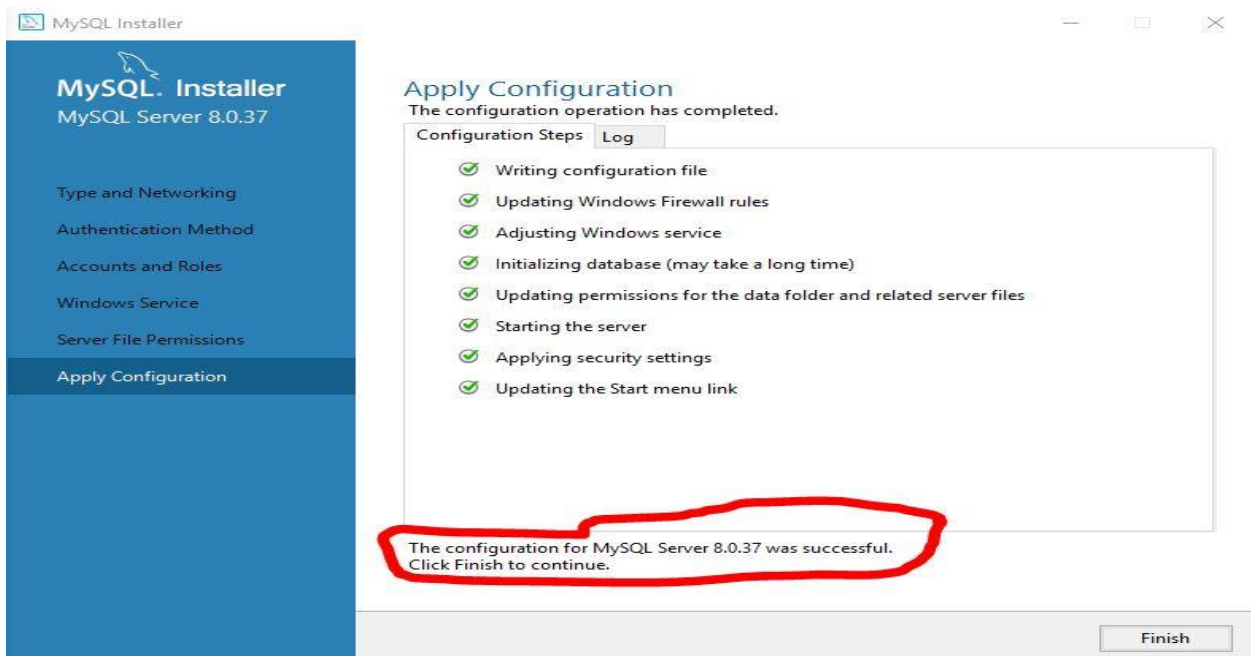

8. Click Next for Product Configuration, Installation Complete, Type and Networking Authentication

    Method without changing the default settings unless otherwise advised.

9. You will be required to create MySQL Root Password, store it in a secure place and click enter.

10. Click Next for the subsequent windows without changing the default settings then Apply

    Configuration changes by clicking Execute

11. Click Finish once you get the window below

12. Tick the checkboxes and click Finish to launch MySQL
